The most important key figures provide you with a compact summary of the topic of "Electricity in Greece" and take you straight to the

Greece's power industry has seen significant developments, particularly in the rapid expansion of renewable energy sources such as wind

Auctions are driving strong deployment of solar PV, onshore wind and battery storage. There are also projects for interconnections and renewables to

But the electricity mix -- the balance of sources of electricity in the supply -- is becoming increasingly important as countries try to shift away from fossil fuels

Greece has significantly expanded its renewable energy capacity in recent years, with over 50 percent of electricity generation now coming from

Energy in Greece is dominated by fossil gas and oil. Electricity generation is dominated by the one third state owned Public Power Corporation (known mostly by its acronym ???, or in English DEI). In 2009 DEI supplied for 85.6% of all electric energy demand in Greece, while the number fell to 77.3% in 2010. Almost half (48%) of DEI's power output in 2010 was generated using lignite. 12% of Greece's electricity comes

This section provides an overview of electricity generation, consumption, cross-border flows, and prices in Greece.

Electricity Production in Greece reached 3,972 GWh in Nov 2025, compared with 3,834 GWh in the previous month. See the table below for more data. Explore the most complete set of 6.6 million time

This year's report offers in-depth analysis across nine chapters, covering the latest developments, challenges, and opportunities shaping Greece's rapidly evolving
