Victoria's energy system is changing. As our ageing and increasingly unreliable coal-fired power stations close, they're being replaced by

This will improve and modernise the grid to connect the areas where sun and wind are abundant so more renewables can flow through Victoria. This

We're changing how we plan and develop electricity transmission infrastructure in Victoria to ensure it benefits all Victorians. As the state's ageing

We need new transmission projects to improve and modernise the power grid in the areas where sun and wind are abundant, so more renewable energy can flow to

VicGrid is developing the new shared transmission line to connect offshore wind energy generated off the Gippsland coast to Victoria's electricity grid. Building a more resilient renewable energy industry
