-----

This solar cell absorbs heat from different angles and generates power twice that of conventional solar panels. It is round in shape; therefore, it makes sense to absorb or collect sunlight

Using the geometry and optical properties of a giant see-through ball, this solution acts like a giant magnifying glass to make power. According to their

An automated external defibrillator (AED) is a portable device that can be used to treat a person whose heart has suddenly stopped working. This condition is called sudden cardiac arrest.

The back-side of the spherical surface can collect significant amount of scattered radiation and reflected solar energy that makes it as efficient as the flat panel without occlusion.

The answer to how produce more energy from sun have been found! Look at the solar power generator in a form of sphere. Read the advantages of this model.

Sphelar#174; is most demanded for BIPV (Building-integrated photovoltaics). Integrated into glass curtain walls, Sphelar#174; generates electricity while it introduces enough lighting inside.

Arthritis is a leading cause of pain and limited mobility worldwide. There's plenty of advice on managing arthritis and similar conditions with exercise, medicines and stress management. But

When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel. This energy creates electrical charges that move in response to an internal electrical field in

Why do high triglycerides matter? High triglycerides may contribute to hardening of the arteries or thickening of the artery walls, called arteriosclerosis. This condition increases the risk of

The Saudi team created the spherical solar cell using the monocrystalline silicon solar cells that currently account for almost
