160 If you want to replace multiple characters you can call the `String.prototype.replace()` with the replacement argument being a function that gets called for each match. All you need is an object

To repair a short circuit in a solar panel, several steps must be undertaken: 1. Identification of the problem area, 2. Disconnection of the solar

Learn when and why to fuse solar panels, how to calculate fuse size, and how to install them, ensuring code compliance, fire prevention, and system

ECMAScript 2021 has added a new String function `replaceAll`. A long time ago in a galaxy not so far away, people used `split + join` or regular expressions to replace all occurrences of a string. I

When replacing all occurrences of `aba` in `ababa` with `ca`, which result do you expect? `caba?` `abca?` `cca?`

There's a function to find a substring within a string (`find`), and a function to replace a particular range in a string with another string (`replace`), so you can combine those to get the effect you want:

The `string.replace()` is deprecated on python 3.x. What is the new way of doing this?

What's the difference between `java.lang.String`'s `replace()` and `replaceAll()` methods, other than the latter uses regex? For simple substitutions like, replace `.` with `/`, is there any difference?

0 You can use the following function to replace Character or String at a particular position of a String. To replace all the following match cases use function.

I can bypass one panel with a relay but to do it simpler with less wiring and fewer possible fault spots, I came up with the idea to short circuit one panel when needed:
