A new type of Fe/N-C catalyst composed of numerous nanoprotusions dispersed on two-dimensional carbon layers with inner-embedded single Fe-atom sites has been developed that

The complementary characteristics of wind and solar energy can be fully utilized, which better aligns with fluctuations in user loads, promoting the integration of wind and solar resources and ensuring the

The invention relates to a communication base station stand-by power supply system based on an activation-type cell and a wind-solar complementary power supply system. The system configuration

Browse the archive of articles on Nature Dissociative ionization of H₂ molecules by the combination of a phase-locked attosecond laser pair and a few-cycle NIR laser shows that ion ...

Discover how hybrid energy systems, combining solar, wind, and battery storage, are transforming telecom base station power, reducing costs, and boosting sustainability.
